

Advancing Government Through Application Modernization

Government IT Services | GSA MAS Contractor

Sequora Partners, an IT Automation LLC company, designs and delivers secure, scalable technology solutions for government agencies and commercial enterprises. Our capabilities include Agentic AI, intelligent automation, custom application development, cloud modernization, data engineering, API integration, cybersecurity, analytics, and enterprise workflow management. We transform complex, disconnected processes into integrated digital platforms that improve operational efficiency, accelerate informed decision-making, strengthen compliance, and deliver measurable value at enterprise scale.

Core Competencies

01

Agentic AI and Multi-Agent Orchestration

Design secure AI-agent ecosystems that coordinate tasks, automate complex workflows, interact with enterprise systems, and maintain human approval for high-impact decisions.

04

AI-Powered Application Modernization

Modernize legacy government applications by integrating AI-enabled workflows, APIs, microservices, cloud-ready architectures, automated testing, and modern user experiences.

02

Generative AI and Intelligent Assistants

Develop secure copilots, virtual assistants, knowledge-search tools, and conversational interfaces for government programs, internal operations, and citizen services.

05

Predictive Analytics and Decision Support

Build machine-learning models, operational dashboards, risk-scoring tools, anomaly detection, forecasting, and data-driven recommendations to improve program decisions.

03

Intelligent Document Processing

Use AI, OCR, and natural-language processing to extract, classify, validate, summarize, and route information from forms, reports, invoices, applications, and case documents.

06

Responsible AI, Security and Governance

Establish human oversight, role-based access, audit trails, model monitoring, data protection, explainability, risk controls, and governance aligned with federal security requirements.

Differentiators

Agentic AI Beyond Chatbots

Self-orchestrating AI agents coordinate workflows, process documents, coordinate tasks, and support accountable end-to-end automation.

API-First and Integration-Ready

Secure APIs connect government applications with legacy systems, cloud platforms, GIS, healthcare, financial, and enterprise solutions.

Government-Grade Security

Role-based access, identity management, encryption, audit trails, secure data handling, and NIST-aligned controls protect critical information.

Modern, Scalable Architecture

Cloud-ready solutions built with modern application frameworks, containerized services, resilient databases, and modular integration layers.

Legacy Application Modernization

Proven modernization approaches transform aging applications, disconnected databases, forms, and manual processes without disrupting essential operations.

Real-Time Data and Analytics

Embedded dashboards, operational metrics, alerts, and predictive insights provide agencies with accurate, timely, and actionable visibility.

Markets Served

FG

Federal Government

Sequora Agentic AI & Platform Capabilities

TI

Transportation & Infrastructure

Mainframe Modernization & Migration

CO
